

BIOCIDES

For more than 40 years Antiseptica has been the partner for professional disinfectants as well as skin protection and skin care products.

Decades of experience in the development, production and sale of proven quality products enable us to react quickly, reliably and flexibly to customer requirements. Besides our standard range, we develop (also in small quantities) tailor-made private label products that are oriented towards the requirements of our customers and the market. All our formulas are subject to extensive quality controls and are constantly being developed further. This ensures that our products will continue to comply with all future legal requirements, such as the EU Biocidal Products Regulation (BPR), while always keeping an eye on the sustainability of our products.

Flexible and service-oriented

Antiseptica sets great value upon short decision paths, flexibility and customer proximity. We have expressly geared our production and logistics to process customer orders quickly and reliably. Based on intelligent control and production processes, we can manufacture our products "on call". Our service is rounded off by competent expert advice from our sales representatives as well as our range of training courses.

Our offer:

Antiseptica GmbH offers both hand and surface disinfectants in two versions:

- (a) as bulk ware in IBCs for self-filling
- b) in PE bottles/canisters (e.g. 125 ml, 500 ml, 1 L, 5 L, 10 L, 20 L, 30 L) as finished products.

All products are of course also available under private label.

Trade mark	Formula	Product types gem. BPR (*)
Manorapid® r.f.u / pure	IPA with refatter, with or without perfume	PT 1
Manorapid® Gel / pure	IPA with refatter, with or without perfume	PT 1

Manorapid® Basic Fresh/ Gel	IPA + N-Propanol with refatter, with or without perfume	PT 1
Superfid / pure	IPA without refatter, with or without perfume	PT 4
Descorapid Tissues	IPA without refatter, without perfume	PT 2

- (*) **PT 1** – human hygiene (products to be applied to human skin)
- PT 2** – public health / private sector (not for direct application on humans and animals)
- PT 4** – Food and feed sector (surfaces only)

Other active ingredients, such as Ethanol, will gradually be filed for biocide approval (mainly EU authorizations).

What are biocides and what should we know about them?

Biocides are chemical substances or mixtures used to kill organisms. For some time there have been increased legal requirements for their targeted application and to minimise environmental pollution. According to the EU regulation of ECHA (European Chemicals Agency), the use of biocides must be regulated anew. As a result, the application and efficacy of the products are reassessed and regulated accordingly. This has far-reaching consequences for the chemical trade and end users.

As a responsible manufacturer, we register all our eligible products with ECHA for Europe-wide approval - a process that takes a lot of time and money and can therefore only be tackled by a few manufacturers.
